Dear Talent
Acquisition,

I am a full-stack developer with emphasis on Next JS, with proficiency in Typescript, MERN Stack, Socket.io, Redis and SQL. Also, I have a good understanding of docker, Kubernetes, and GCP solutions like cloud storage, Pub-Sub, and GKE and how they are essential for creating scalable, and well-maintained Web-Apps.

I love to create progressive, and scalable web apps, to solve real world problems. For e.g. I created a project named ShareDoc that gives my users option to store files, share with other users on app, and if required create a temporary public link to share with anyone, without need to remove access after time period, which we have to do in case of Google cloud, and other alternatives. I have worked on many more apps, in case of curiosity check out my GitHub.

I have professional experience working at Infosys for 2+ years as a full stack developer, where I handled maintenance of codebase, suggest solution to user requirement, and gave KT's to new team Members. Together we successfully handled an International Client of net worth over 15B USD. I had good relationships with my colleagues, and supervisor whom I am giving as a reference.

Here is her LinkedIn URL: <https://www.linkedin.com/in/sayali-udgirkar-568417172/>.

Thank you for your time and consideration. My work experience, coupled with my a nitty for Web Development, would make me a asset to your company. I can be easily reached at your convenience by email or phone, details are on the left side of the page.

Thanks, and regards,
Rohit Pandey
